** T/S UPDATE **

* TIMELINEZ has received a four page letter from Doug Dewey announcing the availability of a Spectrum Emulator for the 2068. This long awaited item should enable most of the Spectrum S/W to run on our computers. The Emulator comes in two versions: a 16K EPROM alone for \$60 or the Emulator with 3 expansion slots (room for 3 more 16K EPROMS) for \$80.

Doug is a long time member of the Triangle Sinclair Users Group in North Carolina and he is editor of their fine newsletter. We have ordered two Emulator boards from Doug for evaluation and we hope to have them available at all the local meetings in the near future. With all the Spectrum S/W available in England, this product should really breathe new life into the 2068.

For complete info. on the Spectrum Emulator contact: Doug Dewey, 206 James St., Carrboro, NC 27510 Phone: (919) 929-3079 before 9pm

* John Warburton at Sunset Electronics informs us that he will soon have two rare 2068 cartridges available: Flight Simulator (\$29.88) and Pinball (\$24.88). Flight has been sold out for some time and Pinball was never released by Timex. John also has several new books on machine language programming for the 1000/1500 and 2068.

* We have also learned that Timex sold all its H/W inventory and a large part of its S/W to a liquidator firm in New York. No news yet on how this might affect the Higgenbottom endeavor. Timex no longer has an 800 phone number, but a recording refers the caller to (203) 573-4883.

* Bill Miller reports that he has schematics available for the 2040 Printer (\$.50/2 sheets) and 1500 Computer (\$1.00/4 sheets). Please send legal SASE to: Bill Miller, 6675 Clifford Dr., Cupertino, CA 95014

HIDDEN WORD PUZZLE GENERATOR

by George Mockridge

The following program will let you make your own word puzzles that so many people find both entertaining and challenging. The fun is increased because you can choose your own words to be hidden as well as determining the size and shape of the puzzle. The challenge is increased because the words can be spelled in any of 8 directions (instead of the 4 directions in most ordinary puzzles).

The original version of this program was written in Microsoft Basic by author George Stewart and first appeared in the Dec. 1983 issue of POPULAR COMPUTING (with corrections in the March 1984 issue). Please refer to this article for a complete description of how the program works. It is quite complicated and ingenious.

A neighbor of mine named Jim Payne next converted it to run on his TI 99/4A computer and I worked from his version to make it run on the T/S 2068 computer and 2040 printer.

I went through about twenty rewrites to get everything operating correctly and I have tested the following printout pretty thoroughly. I am sure there is always room for improvement however, and I would be anxious to hear of any.

I did not find any reasons why the program could not also be modified to work on the TS 1000/1500. This would be a good project for someone and I would be glad to talk it over if anyone is interested.

As stated before, this program will let you customize your own word puzzles. You could create puzzles for birthday or Christmas gifts, get-well cards, thank-you notes, advertising messages, etc. The recipient not only gets the message, but a small personalized gift as well.

The puzzle pictured below is an example of a customized word puzzle. The message is for real. If you want a tape copy of this program, please send a \$10 contribution to TIMELINEZ and I will see that you get one. I hope you will get a lot of use from the Word Puzzle Generator.

* Bill Ferrebee called us from West Virginia to say that he has set up the Rivercities Smart BBS for all T/S users. The service operates 24 hrs. / 7 days a week and sounds very impressive. Bill says he will send us more details for the next TIMELINEZ issue. Contact: Bill Ferrebee, 115 North 7th Ave., Paden City, WV 26159 Phone: (304) 652-1416.

* The latest issue of T-S Horizons (No. 6) has a review of Bob Orrfelt's WP32 wordprocessor written by Walt Gaby. Both are fellow Bay Area group members. T-S Horizons is becoming a very good T/S publication and the price is right at \$12.00/year. Contact: T-S Horizons, Subscription Dept., 2002 Summit St., Portsmouth, OH 45662

* Sinclair Research sent us a press release saying that they will sell an initial 600 48K Spectrum computers to the computing and automation dept. of China's North East Technical College. The computers will be used by the dept.'s graduate researchers as an effective low-cost means of learning BASIC programming skills.

Commented Charles Cotton, head of Sinclair Research's export dept: "China is a very important potential market for us, and one in which we are investing considerable time and effort. This deal represents an important stepping stone to future opportunities".

* Sync Ware News is a new publication from Tom Woods which promises to be a "bi-monthly source of programs, hardware projects, and information exclusively for Sinclair and Timex computers". 1 yr (6 issues) / \$16.95. Contact: Sync Ware News, P.O. Box 64, Jefferson, NH 03583 Phone: (603) 586-7734.

* Two other publications, while not exclusively devoted to the T/S, do have sections dealing with our computers. You may wish to keep an eye out for them at your local newsdealer. The first is COMPUTER TRADER MAGAZINE / \$1.50 and the second is COMPUTER SHOPPER / \$1.95.

The latter has a Sinclair Survivor's column written by Mark Fendrick. To join Mark on CompuServe use EMAIL to: 74216, 1245.

* Finally, TIMELINEZ has used up its backlog of articles with this issue. If we are to continue, we need to hear from you. Please share your knowledge with your fellow readers.

THE JUNGLE JIM

by
Jim March

Welcome to the T81000 jungle! I will be your guide. My name is Jungle Jim. I come from a long line of computer apes so don't worry. I will get you there and back with a minimum of brain strain.

Today we trek to STRING ADDITION and the AND function. Good luck and good hunting!

Addition of Strings To add, or "concatenate," two strings, just place a + sign between them.

Example:

```
LET A$ = "NOW"
LET B$ = "IS"
LET C$ = A$ + " " + B$
C$ = "NOW IS"
```

Addition can be used to input answers from the keyboard longer than one character.

Example:

```
10 LET A$ = INKEY$
12 IF A$ = "" THEN GOTO 10
15 PRINT A$;
20 IF INKEY$ = "" THEN GOTO 20
30 GO TO 10
```

Line 20 makes sure the user has lifted his/her fingers off the key (non-repeating keys). Taking out line 20 gives you repeating keys.

Another example:

```
LET X$ = "BIG" + "DOG"
PRINT X$
BIGDOG
```

AND BASIC Function (shift-A", code=218). AND in T/S 1000 BASIC works differently than AND in other BASICs.

A AND B, where A and B are numeric expressions, returns A if B ≠ 0, or 0 if B = 0.

A\$ AND B, where A\$ is a string expression and B is a numeric expression, equals A\$ if B ≠ 0, or "" if B = 0.

The AND function allows you to do some very compact coding.

Example:

5 SLOW
10 PRINT "USE THE 1-8 KEYS TO MOVE THE", "DOT IN THE DIRECTION SHOWN BY", "THE GRAPHICS CHARACTERS".

```
20 LET X=0
30 LET Y=0
40 PLOT X,Y
50 LET K$=INKEY$
60 IF K$="" THEN GOTO 80
65 UNPLOT X,Y
70 GOTO 40
80 IF K$<"1" OR K$>"8" THEN GOTO 65
100 LET X=X+(1 AND (X<63 AND (K$="2" OR K$="3" OR K$="8")))-(1 AND (X>0 AND (K$="1" OR K$="4" OR K$="5")))
110 LET Y=Y+(1 AND (Y<43 AND (K$="1" OR K$="2" OR K$="7")))-(1 AND (Y>0 AND (K$="3" OR K$="4" OR K$="6")))
120 GOTO 40
```

TIPS ON TYPING IN 2068 PROGRAMS
By Darrell Geiger

When typing in published programs for the 2068 you must keep in mind that a program line can be entered wrong even though it reads exactly the same as the line being copied. Consider the line:

10 PRINT AT 6,15;"R"

The R in the above line can be typed in with the cursor in either the L mode or in the graphics G mode. If you are as innocent as I was you would probably type in the R using the L cursor mode. If R is made into a user defined graphic character (see Chapter 18 of the 2068 User Manual) somewhere in the program, you can have trouble. If R has been entered using the L cursor mode, the R will print out as R when the program is RUN, but this might not be what is wanted. If R has been entered using the G mode, the user defined graphic will be printed out. The graphic symbol will appear in place of R when the program is brought back on to the screen after it has once been run. The lesson to learn is that if you are typing in a program for the 2068 you must study the program to determine if letters "A" to "U" should be typed in the L mode or in the G mode.

A second source of trouble occurs when typing in the graphic symbols found on the number keys 1 to 8 using the G cursor mode. If you are a little hazy about how to type these graphic symbols, you are apt to get into the INVERSE VIDEO mode part of the time. This won't keep you from making the string of graphics from looking exactly the way you want it to look, but the running of the program may be stopped by an error signal. In my particular case the error signal "E - Invalid color" came up further on the the program. This was puzzling since color did not seem involved. I had much trouble finding the fault. Keep in mind that if you get into the inverse video mode, the cursor mode symbol will not change to indicate it.

CONVERT YOUR CAR STRINGY FLOPPY TO STORE VARIABLES WITH THE BASIC PROGRAM JUST AS THE CASSETTE DOES

To convert your CAR interface so that variables will be saved along with the basic program:
+ Check to see you have ROM version 4.0
++ PEEK 12137/2F9B HEX: 15 10 HEX)
++ PEEK 12138/2F9C HEX: 54 40 HEX)
+ Change 12137/2F9B HEX:
From 16:10 HEX:
To 20:14 HEX)
+ Call your new ROM
ver 4.1 321324
If you feel uncomfortable making these modifications maybe another BBS member can help for a small fee.
If you are interested in helping to start a BBS contact me.

*** NON-BREAKABLE PROGRAMS ***
2068 BACK-UP COPIES

1. MERGE " " - Stops Basic Program.
2. Add STOP statements.
3. Isolate the call-up command.
4. Finish LOADING program with commands in the Immediate mode.
5. Add SAVE statement - SCREEN\$ are optional.
6. Try .31000 for CODE reserved space. If program crashes during LOADING, increase size in increments of 1000.

The First Bug

It was the summer of 1945. The US Navy was rushing to finish Mark II, the first American large-scale digital computer. "It was a hot summer with no air conditioning, so all the windows were open," wrote Navy Captain Grace Hopper in the *Annals of the History of Computing*. "Mark II stopped, and we were trying to get her going. We finally found the relay that had failed. Inside the relay—and these were large relays—was a moth that had been beaten to death by the relay. We got a pair of tweezers. Very carefully we took the moth out of the relay, put it in the logbook, and put scotch tape over it. Now, Commander Howard Aiken had a habit of coming into the room and saying, 'Are you making any numbers?' From then on if we weren't making any numbers, we told him that we were debugging the computer. To the best of my knowledge that's where it started."

This logbook page, with the first computer bug still taped to it, is at the Naval Museum at the Naval Surface Weapons Center in Dahlgren, Virginia.

S/W REVIEW. A complete graphics package for the 2068.
Documentation below. Avail. at Sunset Elect. \$19.95.

62

* CANAAN-Software * PROUDLY PRESENTS * GRAFIST *

This program is a fun and easy to use tool. It's possibilities, are quite extensive, and range from a simple sketch pad to complete GRAFIC DESIGNS, as well as VIDEO DISPLAYS and so on.

There are various modes, (which will be explained in detail) these include. Draw, TITLES, TEXT entry, DISPLAYS of TEXT or "PICTURES", saving & loading of grafic "files" setting PRINTER and so on.

One of the important features, are the 3 STORE/RECALL pages. These hold in memory, complete screens (colour H/R grafics TEXT, TITLES, etc, and can be used for any purpose, including ANIMATION or EDITING).

Following, are operating instructions for the various modes. 1-DRAW. You can either use the JOYSTICK, or KEYS 1-8 (1-4 are for diagonal moves). To wipe out (erase), hold down the firing button on the joystick, or press key 0. If you use the keys, then you will have to press key 9 in order to return to normal drawing. The various sub modes and their keys, are displayed on the screen at all times.

Before the drawing is actually activated, (or at any time you wish), the colour options will be displayed. These will always follow in the same order of input, PAPER bright or normal, PAPER colour, FRAME, BRUSH, PEN, TITLES, CHARACTERS.

- BRUSH, is triple high resolution plotting, and therefore is slower than PEN.

C-chrctr.. you will be prompted for an input of any keyboard character including the grafics. Note.. do not enter more than 20 at one time, as screen may automatically scroll upwards. Chrctr will be printed on the line of your last drawing position. Note.. FLASH applies only to these characters, and is turned on and off with key F.

E-erase.. will erase the entire screen (leaving the frame), and retaining all previous positions and colours or sub modes. O-over will print or draw over without erasing. N-normal cancels O-over. M-menu exits the DRAW mode.

S-store.. You will be prompted for the page number (1-3) and the picture and frame will be stored in that page. This allows you for eg. to start a drawing in certain colours, store it, then experiment for a while, either cont storing, or recall the original and go on. Therefore, it is advisable, before any changes, to store the existing screen.

R-recall.. will of course recall any of the above mentioned pictures.

T-TITLE.. Titles will also be printed on last drawing line, however since these are of variable heights and widths, care should be taken when specifying their dimensions, as they erase everything in their path.

The TITLE mode can also be accessed separately (MENU item 3), placed in storage and later recalled in DRAW mode before FRAMING or drawing over.

I-link will return to the above mentioned colour prompts. Note.. We have included the "CHAMELEON" colour, which allows the PEN, BRUSH, TITLE, chrctr, etc to adopt the colour of its nearest plotting positions.

Z-CIRCLE.. after entering the diameter, the computer will automatically, draw a circle to the right of the last PLOTTING position. (unless your specified size is too large for that area)

X-move picture left. Y-move picture right.

These keys will scroll the picture sideways in the above directions. Assuming you have a drawing, and would like to erase the right side, every time you press X, the picture will move to the right, therefore erasing that side, and bringing the left side 1 step closer to the center.

NOTE.. all of the above mentioned "submodes" and features can be used individually or in any combination. Please experiment & "PLAY" for a while, before attempting to recreate the "MONA LISA". As you can see from the examples in the program, the possibilities for creating "GARBAGE" are also quite extensive.

MENU item 2-ENTER TEXT.

This mode is used for creating DISPLAYS (including TITLES), for VIDEO, (credits, advertising etc).

The regular text is automatically "PROCESSED" (WORD WRAPAROUND) etc. TITLES are entered at the same time, the difference being as follows.

1- Enter an asterik (symbol shift B). 2- now enter your TITLE, (max 29 characters long). 3- Enter another asterik. The asterisks at the beginning and end of the titles, tell the computer (upon DISPLAY), that the text contained between them, should be enlarged and displayed in a separate line and perhaps colour. To create a "proper" display, enter text and TITLES separately.

When entering the TEXT (since the computer is in input, may we suggest.. that you enter every paragraph separately. The "FILE" can hold approximately 1100 characters including the ones used for TITLES. All files are automatically saved and loaded together with the 3 "PICTURE pages". Between entries of TEXT or TITLES, you can at any time, start from scratch or continue the TEXT in memory, which can be optionally displayed before new input. Note.. TEXT and TITLES can not be EDITED after entered, therefore take care and do all your planning and editing while in input ("").

REMINDER- every separate input will be treated as a new prgrp
MENU item 6- DISPLAY/PRINT.

This of course will bring us to "the moment of truth". Following will be 4 SUB MENU items.

1-VIEW (animate)- will display the 3 "PICTURES" every time you hit the key for that page (0 will exit that SUB mode). This can be effectively used for animation, and recorded on a VCR, as there are no prompts or any information displayed on the screen.

2-DISPLAY TEXT/TITLES- will do the same for the TEXT/TITLES and will automatically scroll up and repeat, until any key is pressed.

3-COPY pictures to printer- Will automatically printout the 3 pages, (TIMEX or CENTRONICS type DOT MATRIX printer).

4-TEXT/TITLES hard copy- will give you a printout to the above mentioned printers, but including LETTER QUALITY centronics interfaced printers.

5- Will return you to the main MENU.

MENU item 4- SET PRINTER .. you have to pass through this mode if you are using a CENTRONICS INTERFACE type PRINTER. This program includes a MC driver routine for most popular CENTRINICS printers.

MENU item 5- SAVE/LOAD- enter name of file (mark cassette label if you are saving).

This ends these instructions. As usual, this program is bug free, PLEASE TAKE YOUR TIME in discovering its uses.
